(10:24:39) David Gucwa: pretty easy to get around, fortunately
(10:24:58) dr ttol: how?
(10:25:08) David Gucwa: have links render the page instead of dumping source
(10:25:10) David Gucwa: for email
(10:26:05) dr ttol: ok
(10:26:11) dr ttol: lol
(10:26:43) dr ttol: david gucwa is the man
(10:37:11) dr ttol: whats going on?
(10:38:22) David Gucwa: almost there
(10:44:26) dr ttol: can we always have links do all the rendering etc
(10:44:31) dr ttol: link follows
(10:44:31) dr ttol: etc
(10:45:40) David Gucwa: isn't links already doing all the rendering
(10:45:59) dr ttol: i thought you had to change it to render the javascript
(10:46:11) David Gucwa: well, right
(10:51:26) David Gucwa: hmm
(10:51:33) David Gucwa: links doesn't seem to want to render the javascript
(10:51:58) dr ttol: what about kbrowser or whatever its called
(10:51:59) dr ttol: khtml or somehting
(10:52:17) David Gucwa: never heard of it
(10:53:19) dr ttol: mozilla
(10:53:20) dr ttol: firefox
(10:53:22) dr ttol: ephiphany
(10:53:24) dr ttol: links
(10:53:24) dr ttol: opera
(10:53:26) dr ttol: konqueror
(10:53:27) dr ttol: galeon
(10:53:30) dr ttol: all support javascript
(10:53:35) dr ttol: keyword "links"
(10:53:39) dr ttol: http://linuxreviews.org/software/browsers/
(10:56:37) David Gucwa: hm
(10:56:41) David Gucwa: well it's not showing up
(10:57:02) dr ttol: can you try konqueror
(10:57:21) dr ttol: see if its you
(10:57:23) dr ttol: or if its links
(10:58:51) David Gucwa: do they use the same rendering engine
(10:59:30) dr ttol: no
(10:59:46) dr ttol: what about
(10:59:47) dr ttol: elinks
(10:59:55) David Gucwa: well i'm looking at the profile page in mozilla and the email is there
(10:59:57) David Gucwa: elinks = links
(11:00:53) dr ttol: what are some solutions
(11:03:43) David Gucwa: worst case, I write a script that executes all that javascript and gets the email address out of it
(11:04:05) David Gucwa: but there's probably a browser that can render it for me
(11:04:45) dr ttol: http://atrey.karlin.mff.cuni.cz/~clock/twibright/links/features.html
(11:04:59) dr ttol: Javascript support with full user control over script run
(11:05:21) David Gucwa: hm
(11:05:25) David Gucwa: possibly off by default
(11:06:18) dr ttol: wait
(11:06:21) dr ttol: we have 1.00?
(11:06:29) dr ttol: http://atrey.karlin.mff.cuni.cz/~clock/twibright/links/download.html
(11:06:34) dr ttol: links 2.1
(11:06:37) dr ttol: try that

Conversation with javanteal at 2005-02-01 15:16:19 on David Gucwa (aim)
(15:17:35) David Gucwa: I have to keep track of facebook ID numbers for connectu accounts that import. Do you think that I should make a new table that relates connectu IDs to facebookIDs or should I add a facebook ID column to the user table?
(15:18:25) Javanteal: tough call
(15:19:57) Javanteal: It's a one-to-one relationship, right? so I'd say add a field to the user except that I don't think that adding the overhead would be good.
(15:20:31) David Gucwa: Yeah, very few accounts are going to have that field filled in
(15:20:41) Javanteal: oh ya?
(15:20:52) David Gucwa: well, maybe
(15:21:06) David Gucwa: No existing accounts are going to want to import their facebook accounts
(15:21:18) David Gucwa: So only new ones will have it, and then only new accounts that also import from facebook
(15:21:22) Javanteal: Oh, I see facebook.
(15:21:30) Javanteal: facebook is the competitor
(15:21:41) David Gucwa: yes
(15:22:32) Javanteal: ok. so their fbid is their account number
(15:22:40) Javanteal: for their old site
(15:23:00) David Gucwa: yes
(15:23:40) Javanteal: so why do we need to keep this data for long-term storage?
(15:24:20) David Gucwa: because when you want to import your friends from facebook, we're using their facebook ID as identification
(15:24:46) Javanteal: strange, we can't indentify them by name?
(15:25:00) Javanteal: I guess that's not definitive
(15:25:15) David Gucwa: I think we decided that wasn't a good idea because it's not unique and it could possibly be slightly different
(15:25:24) Javanteal: right
(15:26:35) David Gucwa: the best way to do it is by facebook ID
(15:26:39) David Gucwa: and it's not too difficult to store that
(15:27:00) Javanteal: right. it just requires some manual mysql coding.
(15:27:34) Javanteal: I can't decide between table or field.
(15:27:46) David Gucwa: I'm going to do a table then
(15:27:49) Javanteal: ok

Conversation with jtpickatime at 2005-01-17 13:53:50 on David Gucwa (aim)
(13:54:01) David Gucwa: I'm having trouble logging into http://db.pickatime.com:900/svn/Connect
(13:54:17) David Gucwa: I did it fine on Friday but now it's not accepting my username/password
(13:54:21) JTpickAtime: try 216.127.32.54:900
(13:54:30) JTpickAtime: it is a dns problem.
(13:55:22) David Gucwa: k
(13:56:34) David Gucwa: to review: my username is dgucwa and my password is qwer1234$R ?
(13:56:38) David Gucwa: because that does not seem to work
(13:56:48) JTpickAtime: PICKATIME\dgucwa
(13:56:58) JTpickAtime: svn is case sen.
(13:57:38) David Gucwa: I thought I tried that too
(14:04:30) David Gucwa: When I log in incorrectly it seems to block me from trying to log in for a little while
(14:04:57) David Gucwa: I cleared my cache and cookies so I don't think that's the problem
(14:33:32) David Gucwa: I'm really having a lot of trouble logging into this system
(14:54:40) JTpickAtime: oh, sec.
(14:54:42) JTpickAtime: no
(14:55:08) JTpickAtime: still failing, right?
(14:55:27) David Gucwa: yes
(14:55:55) JTpickAtime: add an entry in your hosts file
(14:56:01) JTpickAtime: 216.127.32.54 db.pickatime.com
(14:56:12) JTpickAtime: And a note to remove it in a day or so.
(14:56:28) JTpickAtime: Then you should be able to get to db.pickatime.com:900
(14:56:55) David Gucwa: well, I was using the IP before
(14:57:17) JTpickAtime: Oh, right but you couldn't login.
(14:57:24) David Gucwa: yes
(15:07:33) David Gucwa: any ideas why?
(15:15:10) JTpickAtime: work with mike on it.
(15:15:27) David Gucwa: Okay, what's mike's screen name
(15:15:36) JTpickAtime: mrhayner
(15:16:46) David Gucwa: Oh, what's your name by the way? Wayne never told it to me.
(15:17:02) JTpickAtime: John Taves
(15:17:09) David Gucwa: nice to meet you John
(15:17:31) JTpickAtime: oh, sorry, I was forgetting who you were.
(15:30:15) JTpickAtime (John): What do you want to do with the source.
(15:30:16) JTpickAtime (John): ?
(15:30:32) JTpickAtime (John): The whole project has blown up, so it is not clear to me that we should bother to fix this problem.
(15:31:03) JTpickAtime (John): Do you just need to view the jungalu code to figure out what you want to do?
(15:32:01) David Gucwa: Wayne told me that I was going to be using the login system on connectu in order to make some transactions for another project. I need a way to interface with that system.
(15:32:16) David Gucwa: Honestly I'm pretty lost.
(15:32:52) JTpickAtime (John): well cool your jets for a while.
(15:32:57) JTpickAtime (John): I am not sure what the plan is.
(15:33:48) David Gucwa: hmm
(15:35:28) David Gucwa: I guess I'll call Wayne then

Conversation with jtpickatime at 2005-01-18 17:40:07 on David Gucwa (aim)
(17:40:23) David Gucwa: I have a question about the Jungalu source code
(17:40:41) JTpickAtime (John): I'm not the guy to answer.
(17:40:44) JTpickAtime (John): But what's the question?
(17:41:41) David Gucwa: You use mcrypt functions in php for talking to connectu... I was wondering if this was necessary as we do not have mcrypt installed on our server and we would need to recompile php to get it.
(17:42:12) JTpickAtime (John): Yea, well this is part of a bogus (in my opinion) design.
(17:42:44) JTpickAtime (John): I have no idea why, but they made two separate databases for JU and CU even though they want one login for both.
(17:43:06) JTpickAtime (John): If you like you can login to ww3.pickatime.com (ch.pnwsoft.com is the same IP)
(17:43:11) JTpickAtime (John): and use that server to host your code.
(17:43:42) JTpickAtime (John): But I might be able to get you a better answer when Joel gets back
(17:43:52) JTpickAtime (John): Joel is javanteal on AOL/IM
(17:43:57) David Gucwa: ok
(17:44:15) JTpickAtime (John): He's figured out what the mcrypt stuff does
(17:44:28) JTpickAtime (John): He indicates he'll be back in 10-20 min.
(17:44:36) JTpickAtime (John): When he dings me, I will ding you.
(17:44:40) David Gucwa: Ok thanks
